

SOMA PRAGNYA

Software Engineer

[Personal-Portfolio](#) | somapragnya@gmail.com | +91-7396807534 | [LinkedIn: Soma Pragnya](#) | [GitHub: Soma Pragnya](#) | Hyderabad, India

EDUCATION

Vellore Institute of Technology

Integrated MTech Software Engineering; CGPA: 8.39

Chennai, India

July 2019 – June 2024

Narayana Junior College

Intermediate M.P.C; 95.6%

Hyderabad, India

June 2017 – March 2019

Akshara High School

S.S.C; GPA: 9.7

Korutla, Telangana

March 2017

SKILLS SUMMARY

Languages: ReactJS, JavaScript, Java, SQL, Python, C, HTML, CSS, REST APIs, TypeScript

Tools: Visual Studio Code, Git, Jupyter Notebook, GitHub Copilot & Microsoft 365 Copilot

Domain Skills: API Integration, Object-Oriented Design, SDLC, Microservices, Event-Driven Architecture, CI/CD, DevOps, Analytical & Collaborative Problem Solving

Current Learnings: AWS Cloud, Docker & Containerization

Interpersonal Skills: Communication, Collaboration & Teamwork, Adaptability, Curiosity to Learn New Technologies, Strong Technical Fundamentals, Leadership, Time Management

WORK EXPERIENCE

Bank of America

Software Engineer 1

Hybrid

July 2024 – Present

- Designed and developed a modern React.js frontend application from scratch to replace a legacy system as part of a large-scale modernization initiative, delivering a production-ready solution within 9–11 months.
- Owned the end-to-end application lifecycle, including development, API integration, debugging, testing, and performance optimization, using React.js, JavaScript, TypeScript, Node.js, and REST APIs.
- Acted as feature lead, managing commits, builds, deployments, and production releases, ensuring high reliability and smooth livesite operations.
- Solely owned frontend development of a second application and delivered it to production within 3 months.
- Currently working on the frontend of a real-time desktop trading application (OpenFin + React), contributing to a spreadsheet-style cell model with formula dependencies and live updates via an event-driven, AMPS-based subscription system for low-latency data delivery.
- Built a ready-to-use Copilot prompt that generates standardized Horizon Wiki pages, helping teams quickly document their applications with minimal manual effort.
- Currently building a customizable AI code review extension for pre-commit and pull request reviews that flags issues, suggests fixes, and adapts to each project's context and codebase, greatly reducing reviewer and developer time.
- Awarded Gold Recognition Award for exceptional performance and ownership (rare for early-career engineers).

PROJECTS

Beautified — Full-Stack AI Fashion Web App [Link](#)

- Developed Beautified, a full-stack AI fashion web app (React, Node/Express, Three.js) enabling virtual garment try-on via a diffusion-based model and 3D model visualization.
- Integrated hosted AI inference through a secure API backend and built an image-to-3D pipeline; designed as a virtual-wardrobe + AI-stylist platform.

AI-Powered WhatsApp College Admissions Assistant [Link](#)

- Built an AI-powered WhatsApp admissions assistant that acts as a bridge between students and graduation colleges by collecting student preferences, recommending suitable colleges, and answering follow-up queries about fees, deadlines, eligibility, and application details.
- Developed the system with Node.js, Express, Twilio WhatsApp integration, SQLite-based college/student data management, an admin dashboard for college records, and multi-provider LLM support using OpenAI and Gemini.

Pulse App — React Native (Expo) Mobile App [Link](#)

- Built a privacy-focused mobile companion app that lets paired users stay subtly connected through real-time presence tracking, instant “nudge” notifications, and emergency SOS actions.
- Developed the app using React Native, Expo, TypeScript, Firebase Realtime Database, and AsyncStorage, with a custom animated UI and device-based pairing workflow for lightweight, always-on connection features.

ACHIEVEMENTS & CERTIFICATIONS

- Published a book chapter, “**Transparency in the Healthcare Supply Chain for Patient Applications,**” derived from capstone research on load balancing, improving performance and transparency in healthcare supply chain systems. [Link](#)
- Java course certified by IIT Bombay | Machine Learning Using Python course certified by Skyfi Labs
- React.JS, JavaScript, Python, MongoDB, REST API certified by IBM Developer Skills Network

VOLUNTEER EXPERIENCE

Event Host — Bank of America Fresher Engagement Program

- Co-hosted a fresher engagement event with a team of three, leading interactive games, creative activities, presentations, and live Q&A to boost engagement and team collaboration.

Uddeshya — VIT Chennai’s Volunteering Club

VIT, Chennai

- Director of Design and Content, Social Media Manager & Event Management — June 2022 – July 2023
